

CLINICAL DECISION TOOL FOR THE USAGE OF SERUM CALCIUM AND SERUM MAGNESIUM
IN CHILDREN PRESENTING WITH SEIZURES TO
PAEDIATRIC EMERGENCY DEPARTMENT HOSPITAL TUNKU AZIZAH

¹ Paediatric Age Group from ≥ 6 months old until ≤18 years old

² List of Comorbid(s):

- Previous episode of Hypocalcaemia/ Hypomagnesaemia
- Known Chronic Kidney Disease/ End Stage Renal Failure
- Known Vitamin D deficiency
- Chronic Pancreatitis
- Chronic Diarrhea/ Malabsorption

³ Active seizures:
Actively seizing upon arrival or while in HTA

⁴ Fever/ History of fever:
Temperature ≥ 38 degrees celcius

⁵ Investigations: Serum Calcium and Serum Magnesium

⁶ Standard of Care:

i) Depends on clinical impression/ judgement

- a) CNS Infections, Lesions
- b) CNS Lesions
eg: Space Occupying Lesions, Bleeding
- b) Trauma/ Non- Accidental Injury
- c) Other electrolyte abnormalities
eg: hyponatremia/ hypoglycemia
- d) Metabolic derangements
eg: IEM, Uraemia, hepatic encephalopathy
- e) Toxicology
- f) Other systems
eg: Arrhythmias
- g) Any life threatening cause of seizures

ii) Serum Calcium/ Serum Magnesium can still be performed if clinically indicated
